The New Revenue Standard: Managing the Implications

Tim Mullis, RevCon Project Leader
McKesson Technology Solutions

Path to Convergence

McKesson Technology Solutions (MTS)

- Introduction
- MTS Business Overview
- Revenue Recognition Landscape

Path to Convergence

MTS Preliminary Impact Assessment:

- Business revenues
- Key policies changes

Path to Convergence

MTS High-Level Change Impact Assessment:

- Financial processes
- Systems FIT GAP reveiw

Path to Convergence

MTS Detailed Planning:

- Transition method
- Define convergence project scope
- Resource model
- Budget and timeline

Path to Convergence

Critical Considerations for Convergence:

- Develop accounting policies *framework* (new GAAP), drives requirements
- Data, data, data.
 - Assess data existence and validity of today
 - Determine your data needs for future
 - Maintain and refresh

Path to Convergence

Critical Considerations for Convergence (cont):

- Comprehensive Systems assessment
 - Capabilities
 - How to operationalize adoption
 - Full participation from IT, business and finance/accounting

The New Revenue Standard: Managing the Implications

Bavan Holloway, Vice President, Corporate Audit
The Boeing Company

Overview

The Boeing Company

- Customers and customer support in 150 countries

Outside Consultants and Advisors

Operating Rhythm

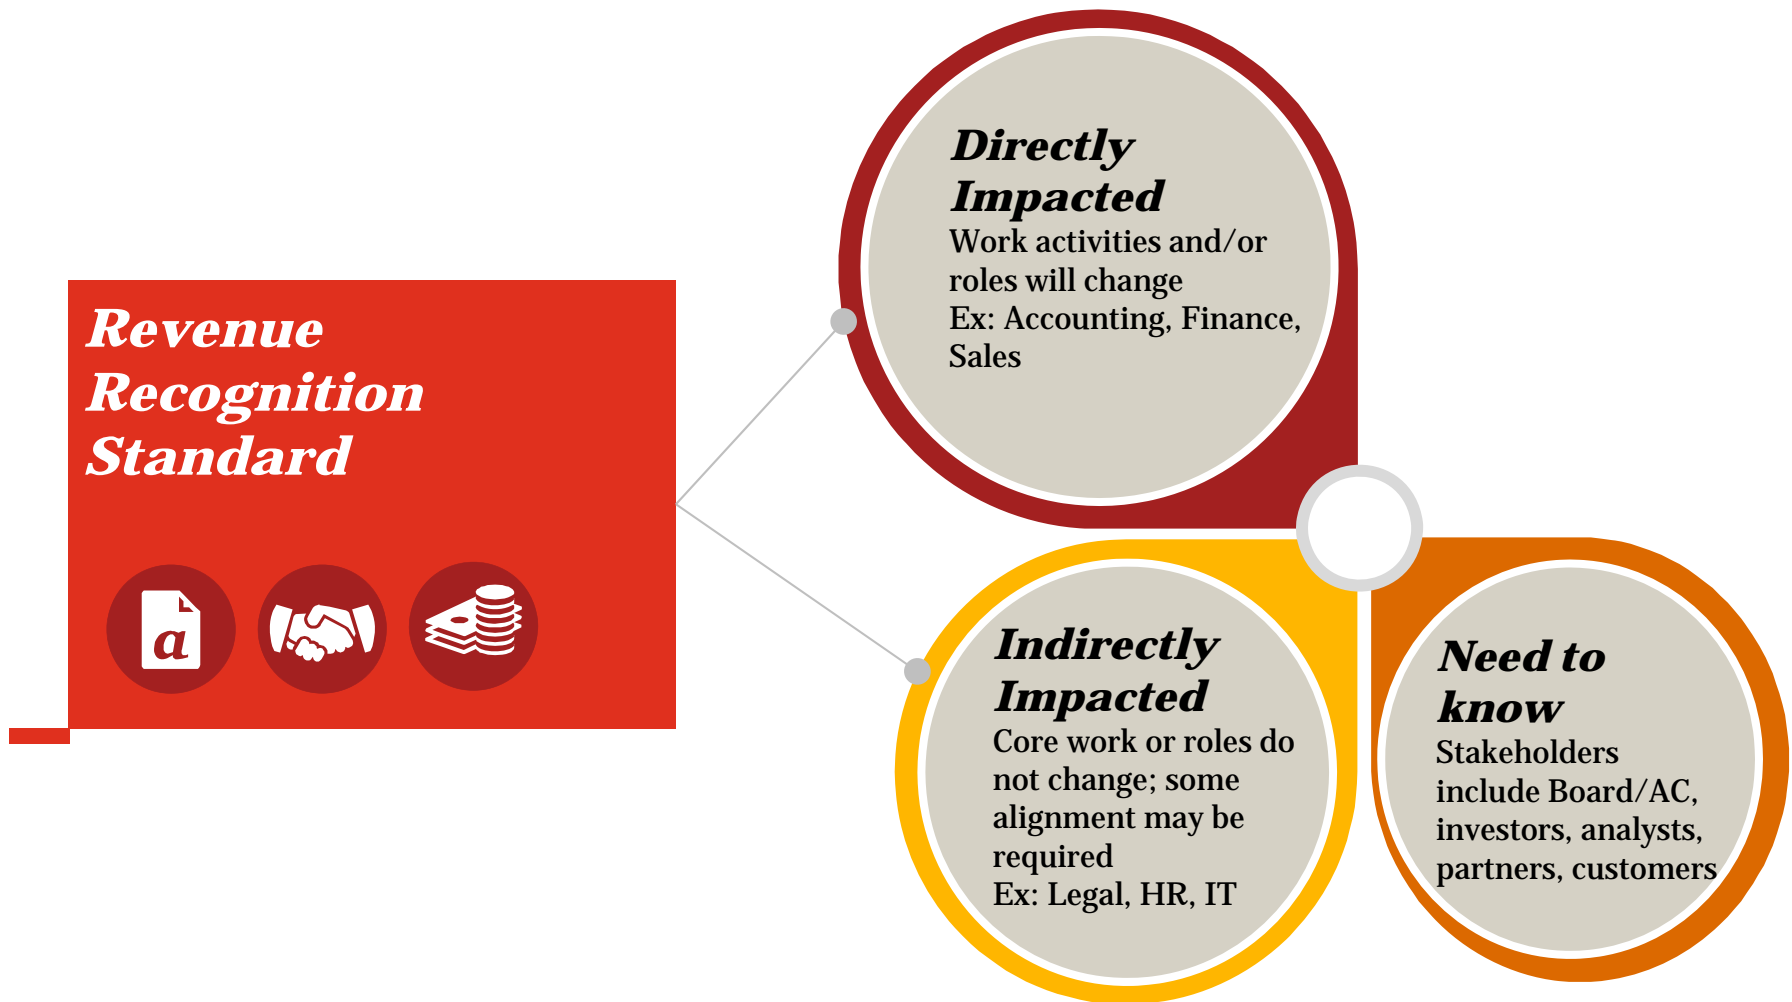

The New Revenue Standard: Managing the Implications

Jeff Kammerer, Partner
PwC

Impacts Extend Beyond Accounting

Implementation Considerations

Technology

- May need to modify current systems (ERP, revenue modules and other databases) to capture new information, perform computations and enable processes that were not previously required

Controls processes

- New data capture, calculations, process flows, and revenue recognition triggers will require manual and automated control points
- The standard requires companies to make more estimates and disclosures, calling for new controls and processes

Business opportunity

- The new revenue standard may provide business opportunities around pricing strategy and/or product offerings and bundles

Forecasting

- Forecasting will need to reflect the new revenue recognition timing and patterns

Involvement of IT is paramount; the new standard provides an opportunity to implement revenue automation replacing Excel and manual processes

Cross Functional Impacts

Compensation and bonus plans

- Sales compensation & partner incentives may need to be redesigned if based on earned revenue

Contracts

- Increased importance of visibility of performance obligations and enforcement of contracts at all stages of sales cycle
- Existing terms could take on new meaning; companies may consider re-negotiating contracts to maintain the original intent

Tax implications

- Timing of cash tax payments could be affected – especially if revenue recognition is accelerated under the new standard

Investor relations

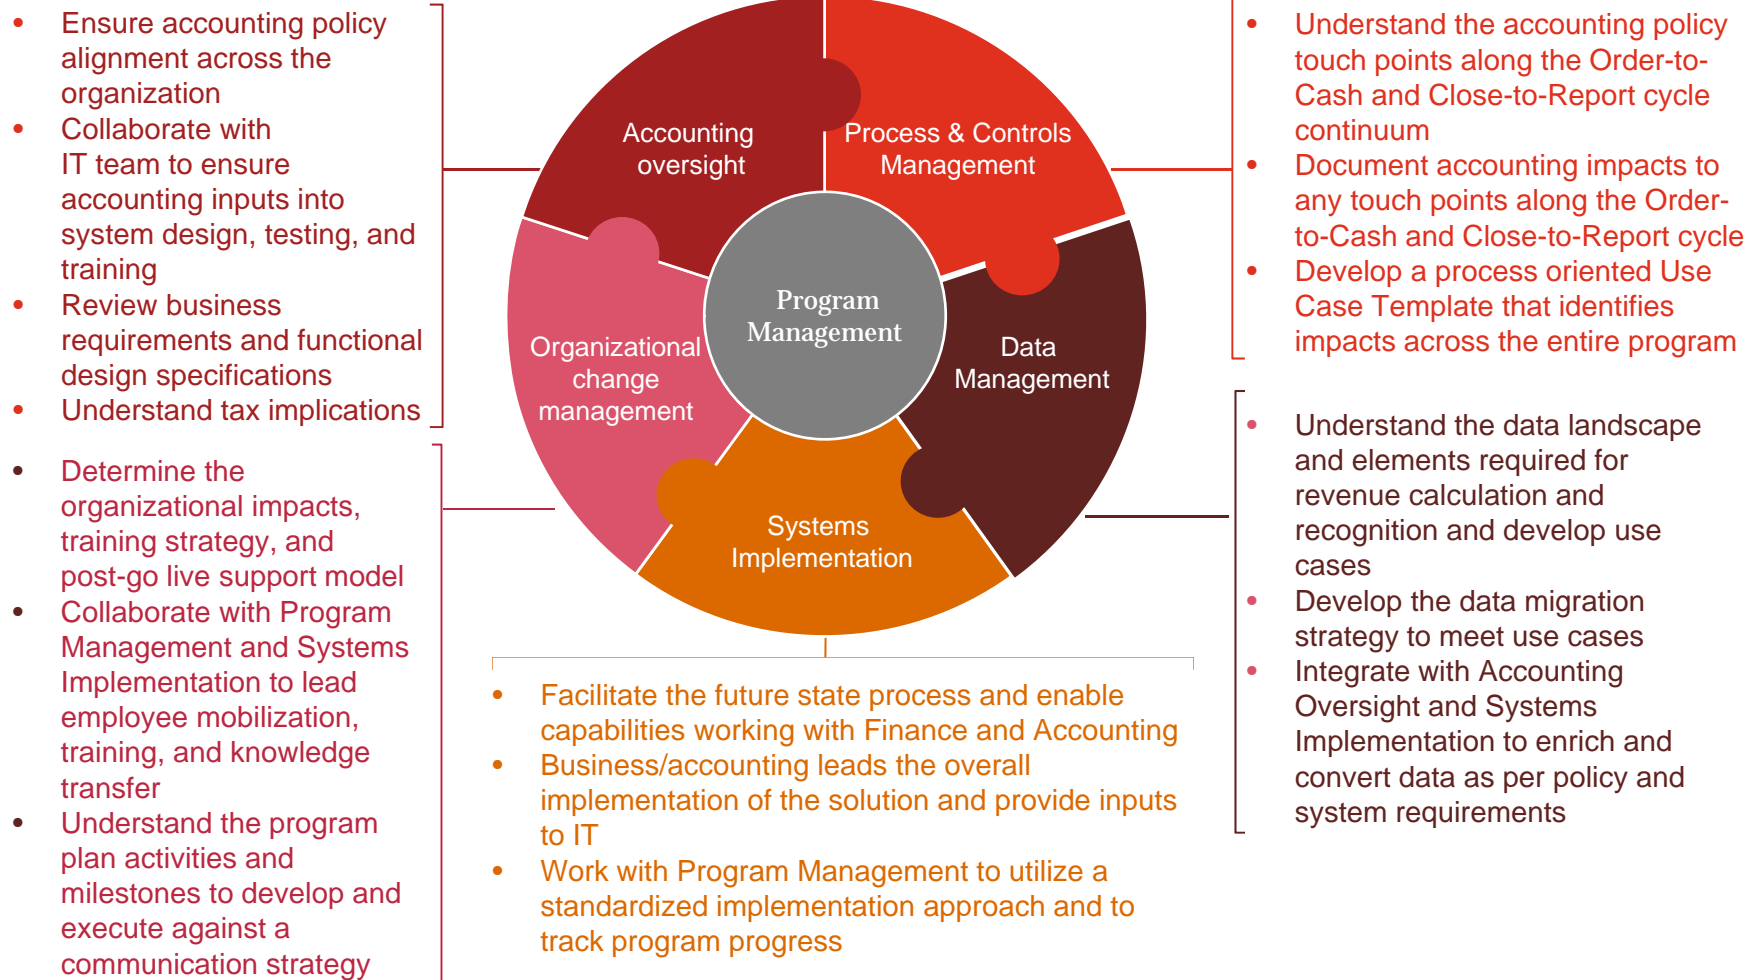

- Stakeholders will want to know how revenue recognition will change and how the new standard will affect the company's financial results

Groups outside of accounting that will need to be consulted include:

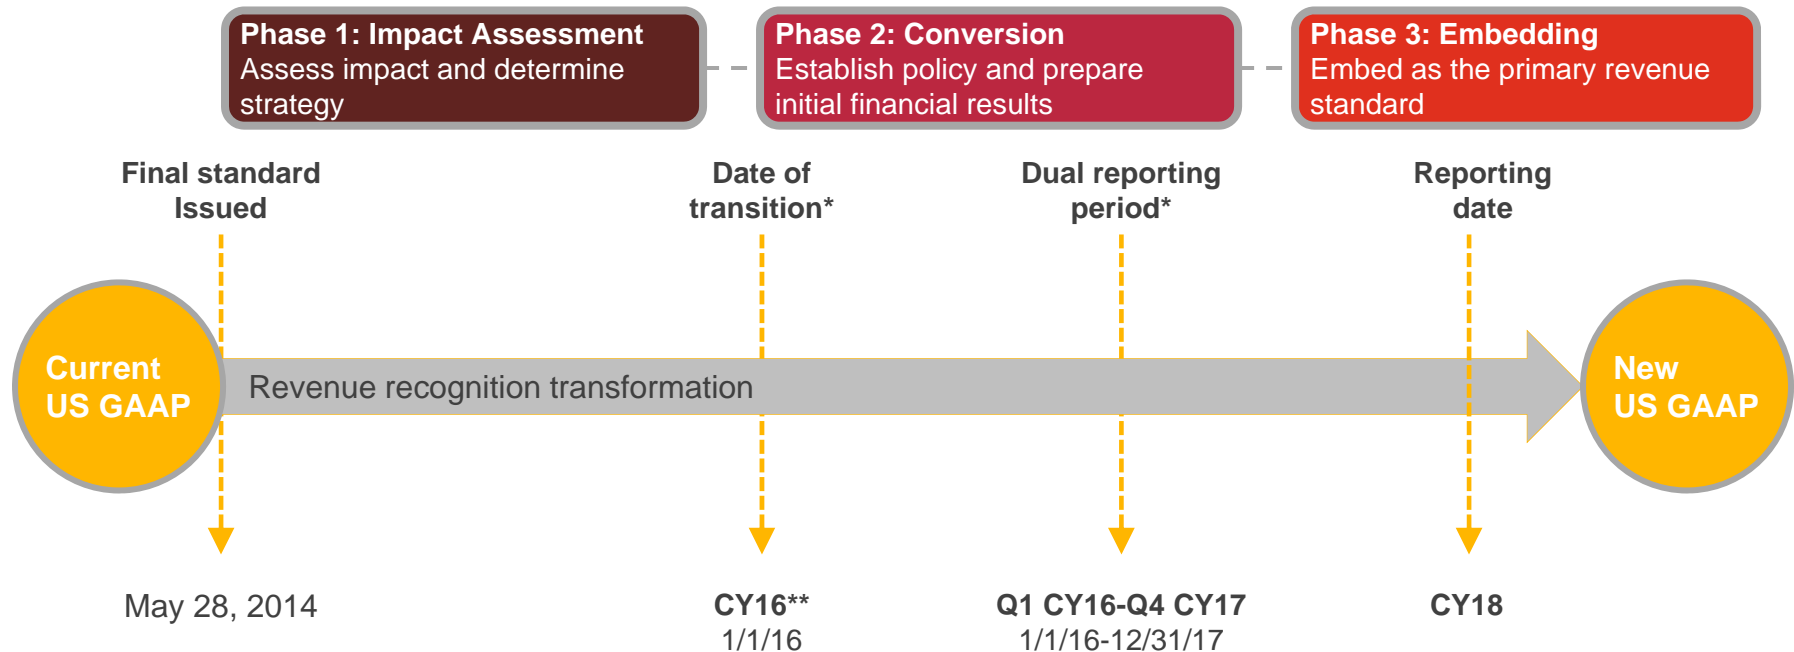

- *Audit Committee*
- *Investor Relations*
- *Financial Planning & Analysis*
- *Sales*
- *Legal*
- *HR*
- *Tax*
- *Accounting IT Function*
- *Internal Audit*

Investors and analysts will need to be educated on the impact of the new revenue standard

Integrated Program Framework

Phased approach to implementation

*Assumes Public company elects to use retrospective transition approach

**Assumes 1 Year delay in effective date
